

Computer Engineering student with hands-on experience in Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and Computer Vision. Contributed to the development of AI-powered applications including document intelligence platforms, multi-language code debugging systems, and YOLOv8-based object detection solutions. Skilled in Python, deep learning fundamentals, vector search, and backend development, with a strong interest in building scalable AI systems and intelligent applications.

SKILLS

|                                                    |                                                                                          |
|----------------------------------------------------|------------------------------------------------------------------------------------------|
| <b>Languages</b> Python, Java, C++, C              | <b>Tools</b> Git, GitHub, Postman, Maven, Ollama                                         |
| <b>Backend</b> REST APIs, Flask, Spring Boot, JDBC | <b>Concepts</b> DSA, OOP, DBMS, Operating Systems                                        |
| <b>ORM</b> Hibernate                               | <b>Cloud</b> AWS (EC2, S3, IAM, RDS, DynamoDB)                                           |
| <b>Databases</b> PostgreSQL, MySQL                 | <b>AI/ML</b> Generative AI, LLMs, RAG, Transformers, CNN, RNN, LSTM, GAN, YOLOv8, OpenCV |

TECHNICAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                     |
